Odyssey SAP WHE Project Deployment Flow Global Smart Forms (GSF) - Version 6

The development and testing of application takes place outside the workflow. The project workflow automates the routine and makes sure that every step is followed correctly with minimum time spent by the Developers, Testers, and so forth. Odyssey guides code check-in, package builds, code promotions, transport and local build, and so forth through three different environments. The process does not allow untested and unapproved code to reach the next environment.
