SDLC Management

Odyssey Software Development Life Cycle (SDLC) Management takes over at the individual system level, and may be automatically initiated or manually begun in reference to a Change Management lifecycle.

SDLC Management ensures recording and tracking of new development. When a Team Leader initiates the development activity, the SDLC form mandates they enter all the relevant information and gives them a chance to attach supporting documentation. In this example, the project expedites builds and deployments to Dev, UAT and Production environments while ensuring that it collects approvals at every stage for the next environment.
