

WHAT YOU'LL LOVE MOST

ABOUT ODYSSEY DIGITAL AUTOMATION

FROM ELIMINATING REDUNDANCY AND STREAMLINING WORKFLOWS, TO CONNECTING APPLICATIONS, DATA AND PEOPLE – THERE'S A LOT TO LOVE ABOUT NO CODE AUTOMATION.

TO HELP EXPLAIN FURTHER, WE'VE ROUNDED UP THE KEY ASPECTS THAT OUR CUSTOMERS LOVE MOST ABOUT OUR POWERFUL DIGITAL AUTOMATION SOLUTION.

KEEP READING THE LIST BELOW FOR THE TOP BENEFITS OF ADOPTING NO CODE AUTOMATION.

FLEXIBILITY & SPEED

One important aspect our customers love is that Odyssey provides the speed of a commercial off-the-shelf (COTS) solution, but includes all the customizations required to support their team's needs. Each organization is unique and Odyssey can address the specific challenges your company faces that others may not.

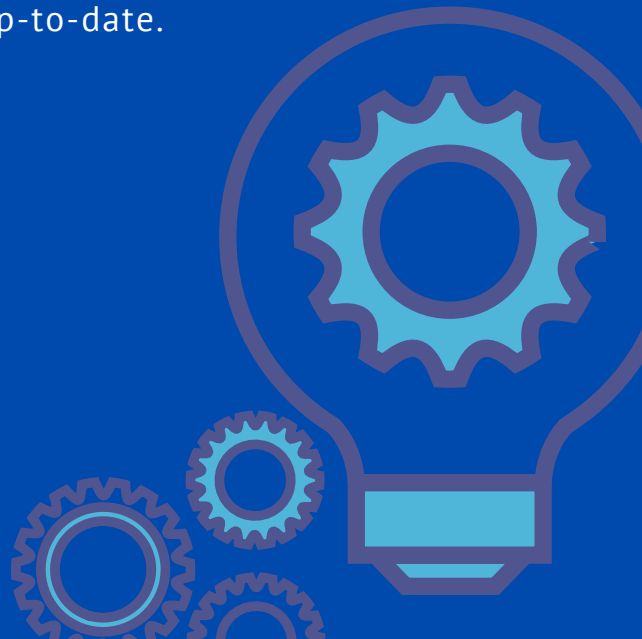

In addition to the quick implementation, automating your workflows saves team members time by eliminating redundant manual tasks, allowing them the time to focus on more meaningful goals.

No code automation also creates a stable framework for integration. Organizations can quickly scale to meet changing business needs, making it more flexible than point-to-point solutions. Future-proofing your organization with no code automation makes it easier to accommodate growth and adapt to the ever-changing digital landscape.

INNOVATIVE INTEGRATION

What's not to like about next generation integration capabilities? The Odyssey platform goes beyond APIs to make the most of the tools you are already using. And to make it even easier, Odyssey comes pre-installed with over 4,000 integration points across over 350 tools and applications.

Our solution excels by facilitating the communication across platforms to consolidate data and increase collaboration. By using a comprehensive configuration approach, your team can quickly and securely integrate with third-party applications. The platform does the "sweet talking" so you don't have to manually manage disparate applications to cultivate actionable insights for your organization. Plus, with no code, there are less points for potential security threats and the platform continually keeps integrations up-to-date.

SECURITY & CONTROL

We take pride in offering a bespoke solution that fits into your company's specific digital transformation trajectory and provides a catalyst for continued growth.

Our goal is to empower companies to simplify business processes, streamline workflows and take control of data, all while lowering risk. With Odyssey, you can experience comprehensive automation, giving your team full control of important information across the enterprise in one secure platform.

Of course, security is paramount. That's why Odyssey has a powerful ten-layer security framework engrained into the platform foundation for enhanced stability that's sure to impress. No code not only alleviates the burden that often falls on IT teams, but since the user never touches the code, the platform ensures security at each layer of the interaction.

The Odyssey Dashboard can also act as a knowledge disseminator to share information with the right people in the right way. You can take the reins on user access and permissions, setting regulations on specific groups of device types so you always know where data has been and who has accessed it.

WELCOME TO RELENTLESS SIMPLICITY

Here at Pantheon, we develop solutions to help you simplify your enterprise. We are pioneers in the true no code movement and are firm believers in the power of automation and how it can help drive efficiency and bring value to your bottom line. Let us be a resource for your organization as you embark on your digital transformation journey.

CITIZEN DEVELOPERS WELCOME

Perhaps the most notable quality of no code is that you don't have to be a skilled developer to craft intelligent workflows or achieve powerful integration. Odyssey is a platform for all users, allowing team members to build connections, processes and integrations without a single line of code.

Rather than hand-coding or using APIs (as is the case with low-code development platforms) Odyssey enables both citizen and skilled developers to use drag-and-drop task agents to complete integrations. Configuration options and variables are presented as drop-down menus, check boxes, and simple entry fields so your team can easily customize processes.

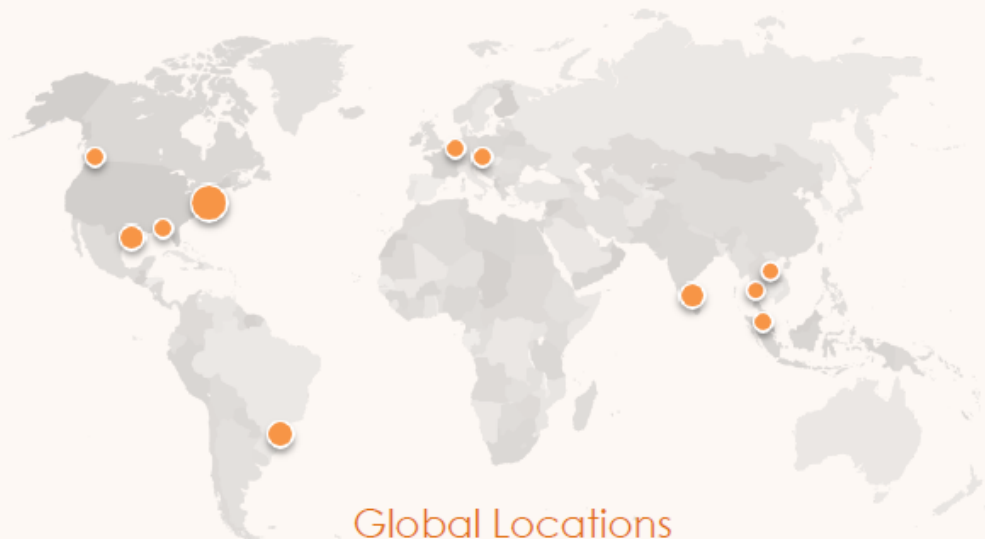

With this true no code solution, organizations can save costs on training and onboarding expensive software developers. Odyssey's intelligent task agents automatically perform the response, error and data handling that is required to get data from one application to another. Users of all skill levels can leverage these features without a developer needing to create custom scripts or logic.
